

ROMEIO Project will have a significant presence at Wind Europe Offshore Conference in Copenhagen

The flagship initiative will have its own exhibition space, organize a scientific workshop and celebrate two technical conferences. The event will take place between the 26th and 28th of November in the Danish capital.

The European project ROMEIO, backed by the Horizon 2020 programme of the European Commission, will have a leading role during the next Wind Europe Offshore Conference, that will take place between the 26th and 28th of November at the Bella Center exhibition premises in Copenhagen.

During the event, where industry leaders and specialists will discuss the main trends in offshore wind, exchange scientific points of view, analyse technological achievements and review economic perspectives, the flagship initiative will have its own exhibition space at the stand E-F20.

In addition to that, the project will organize a scientific workshop "Digitalization concepts to optimize O&M strategies in Offshore Wind Energy" on the opening session of the event, the 26th of November, at 12 pm Danish local time in the Innovation Park.

The workshop will start with César Yanes, ROMEIO Project coordinator on behalf of Iberdrola, who will be in charge of the introduction remarks.

The experts Cristian Rodenas-Soler, from Siemens Gamesa, and Elena González, representing Iberdrola - Scottish Power, both companies partners of ROMEIO Project, will make a presentation followed by a discussion panel to address novel approaches for the diagnosis and prognosis of critical failures affecting offshore wind turbines.

Úrsula Smolka, from Ramboll, will be in charge of sharing the requirements, challenges and opportunities delivered by the development of digital twins for structural parts in offshore wind turbines. During this session, the multi-scale pilot settled in the Wiking offshore windfarm, located in the German waters of the Baltic Sea, will be presented.

Later, Daniel Rodríguez, from Minsait INDRA, Moritz Gräfe, from Uptime, and Michael Nidd, from IBM Research Zurich, will talk about disruptive digitalization concepts and cloud-based ecosystems. The case studies chosen to illustrate this conference are Wiking and Teeside pilot tests.

The workshop will end with a fourth session about the development of an open access O&M tool for availability and cost estimation of offshore wind farms by the expert of the University of Strathclyde Athanasios Kolios.

Besides this workshop, ROMEIO project will have a leading role in the conference programme. Moritz Gräfe will present a conference titled "Analytics based Maintenance for Offshore Wind Turbines" the 27th of November also on the Innovation Pavilion Stage. The next day, Juan Prieto Vivanco, of Minsait INDRA, will have the opportunity to share with the audience the conference "Novel monitoring and control architectures for wind generation management". Both sessions will be moderated by ROMEIO's partner ZABALA Innovation Consulting.

The Wind Europe Offshore Conference will include a gallery of technical posters and several exhibition halls housing the entire value chain. It will also include networking and social events in order to enhance links between stakeholders.

ROMEIO's presence at the conference is part of the project commitment with the reinforcement of the links with the main European actors in the field of wind and renewable energy.

About ROMEIO Project

ROMEIO Project (Reliable OM decision tools and strategies for high LCoE reduction on Offshore wind) is an initiative funded by the Horizon 2020 programme and its main objective is to reduce offshore O&M costs through the development of advanced monitoring systems and strategies, aiming to move from corrective and calendar based maintenance to a condition based maintenance, through analysing the real behaviour of the main components of wind turbines (WTGs).
